

SPECIALIZED STEEL STRUCTURES

FILTERING PLANT – VIOVENT SA

Construction of a dust filtering unit in Bulgaria, based on technology provided by VIOVENT.

The project involved the design, supply and delivery of the metal frame of two 7.72m x 7.70m filters with a height of 14.29m.

VIOVENT's goal is to conform with its client's goals and environmental requirements, in order to achieve the lowest possible emissions in the most fiscally efficient way and to minimize the plant's maintenance needs.
