THREE FILTERING PLANTS OF 90.000 m³/h - STOMANA ENGINEERING S.A.

Three dust removal (filtering) plants with a capacity of 90.000 m³/h.

The project involved the design, supply and delivery of the metal frame of three 7,50m x 7,50m filters with a height of 12m.

The goal is to conform with its client's goals and environmental requirements, in order to achieve the lowest possible emissions in the most fiscally efficient way and to minimize the plant's maintenance needs.

CLIENT	STOMANA ENGINEERING S.A.
LOCATION	SINDOS, THESSALONIKI
YEAR OF CONSTRUCTION	2019
WEIGHT	3 x 100 tn
